

Are current environmental challenges a problem or rather an opportunity for automotive business?

Focus on energy efficiency and carbon footprint of automotive manufacturing processes

FEB^o Chairman Thomas Leysen: "Industry is a source for solutions rather than problems."
FEB - Federation of Enterprises in Belgium

Dear Sir,
Dear Madam,

The Automotive Suppliers Section of FEBIAC kindly invites you to participate at their annual seminar on the occasion of the European Motor Show Brussels:

Friday, JANUARY 16th 2009

With keynote speaker
Mr Patrick Collignon
Production Unit Director Volvo Truck USA

Are current environmental challenges a problem or rather an opportunity for automotive business?

Focus on energy efficiency and carbon footprint of automotive manufacturing processes

The management of Volvo in Sweden and Belgium has decided to make Volvo Europa Truck NV in Oostakker near Ghent the first CO₂-neutral company in Belgium by 2007. Projects have been launched to reduce energy consumption while switching over to CO₂-neutral energy sources and production processes. Partnerships, with among others Electrabel, have been setup strengthening each others core competencies and making the new 'Cab Trim' production area even CO₂-free.

"We hope this project will inspire other companies. The technology is there. It's a question of daring", says Patrick Collignon.

Furthermore, two speakers of Bosch-Rexroth will discuss the subject from the manufacturing equipment providers' perspective. We welcome Mr Elmar Worms, Global Account manager Audi and Mr Francis Singer, CEO Bosch-Rexroth BeNeLux.

PROGRAM

09h00	Breakfast buffet (Brussels Expo, Hall 11 – 2 nd floor, room 11.23)
09h30	Welcome (Hall 11 – 2 nd floor, room 11.22)
